10. Other:					

Continuation of 5. does NOT place the application in condition for allowance because: it is not found to be persuasive. First, applicant argues that Silver does not teach both vitamin D and a calcium salt as active agents in the formulation. The examiner maintains her position, that Silver anticipates that instant claims by teaching the presence of both calcium salt and vitamin D. Applicant is arguing patentability because Silver does not specificllystate the the calcium ion be an active agent, however, this is not persuasive. In order for this argument to be persuasive, applicant must show comparative data, demonstrating actual, patentable differences between the two formulations. Additionally, applicant argues that the French reference does not teach the same amount of elemental calcium as claimed by applicant. This argument is not found to be persuasive, because applicant has provided no comparative data demostrating that an increase in the amount of elemental calcium has a patentably significant effect..
